

The Modular Workstation With The Power To Change

Stingray has already transformed the POS market. Its thoughtful design and expert engineering give you the power to change the way you do business, delivering better value and streamlining operations. By helping to improve business operations and increase return on investment, Stingray demonstrates the capabilities of Panasonic's complete range of business solutions.

Easy And Cost-Efficient Service

The innovative all-in-one modular design of Stingray reduces total cost of ownership and greatly simplifies service. Designed for the end-user and engineered with components you can easily replace yourself, Stingray enables you to reduce costly downtime to your business.

Stingray's LCD display, hard drive, main body, rear display (static or interactive) and 2/4 line customer order display are user removable and replaceable with no tools required, through the use of conveniently placed thumb screws. It's fast, easy, and cost effective – you can simply replace the module affected, rather than the entire machine. Save both time and money with easy do-it-yourself on-site troubleshooting as well. End-users can simply swap modules between workstations to isolate for testing and to verify functional status. Or swap modules from low volume workstations to higher volume workstations to minimize impact to your restaurant.

Custom-Design Stingray To Meet Your Needs

Stingray's modular design also enables convenient, cost-effective customization to meet specific application needs. Configure Stingray with the confidence of knowing you can make changes at any time. Increase RAM, swap or change hard drives, remove or replace the LCD display or switch the display from landscape to portrait, add a card reader where you want, or add security devices. Stingray integrates with the Panasonic Toughbook Handheld order taker to keep lines moving. All of which makes Stingray an even smarter economic choice.

Open Architecture Fits You Perfectly

Stingray's open architecture runs virtually any operating system and software, so you can implement your choice of off-the shelf or custom POS application to meet your specific needs. With its high speed processor and up to 4 GB of on-board RAM, Stingray is ideal for stand-alone applications or networked to run the most demanding back office operations. Stingray even runs multiple software applications, for enhanced functionality. And Stingray is backwards compatible, allowing operators to replace one workstation at a time for maximum cost-efficiency.

Unsurpassed Quality Testing Ensures Durability

Built to withstand spills, static, dust, dirt, shock, grease, extreme temperatures and humidity, our workstations deliver all the durability and reliability you expect from Panasonic. We developed a stringent battery of quality engineering tests to ensure each workstation will stand up to the rigors of everyday use in the field. Every Panasonic workstation is purpose built for harsh environments. Some of our customers are still using them after 10 years of operation – a testament to our strict quality control.

With more than 30 years in the POS industry, Panasonic has the experience gained from designing, engineering and supporting multiple generations of Point of Sale solutions. All reflected in the quality, durability, convenience and intelligence built into every Stingray.

Changeable Features And Options Include:

- Customizable 3 1/2" or 2 1/2" hard drive or compact flash (CF) card
- 1 GB of RAM upgradeable to 4 GB of RAM runs multiple applications
- Adjustable, dual back lit LCD display provides high-resolution, high-contrast images for faster, more accurate order taking and is available in 12" or 15"
- Resistive or capacitive touch screen technology
- 15" LCD anti-glare touch screen display can be oriented as portrait or landscape
- Rear-facing, 2 or 4 line or 15" LCD customer order confirmation display to improve order accuracy
- Integration of security solutions such as fingerprint/biometric readers for operator ID verification
