- Drive Thru Order Taker Station
- Drive Thru Cashier Station
- Packing Monitor for DriveThru Cashier
- Drive Thru Display Board
- Preparation Projection System
- Back Office Station
- Enterprise Management Solution

## Front Counter Fast Food Station - Fast and Easy

Flashpoint has dramatically simplified the fast food order entry screens. The counter cashier simply has to follow the steps that Flashpoint displays, and dose the check when finished.

## Packing Monitor for Front Counter Stations- Speed and Efficiency

One person takes the order at the front counter while another uses the packing monitor to fill the order. As the sales items are selected at the front counter, they are immediately displayed on the packing monitor. With this method, orders should be packed by the time the customer pays.

## Drive Thru Stations- Effective Task Co-Ordination

Supports multi-lane and multi-window locations. As orders are placed, they are sent to kitchen preparation monitors, packing monitors and the drive thru cashier station on a first in, first out basis. For single window locations, Flashpoint supports a combination drive thru order taker/cashier station.

## Drive thru Display Board

Flashpoint interfaces to drive thru display boards that display the orders to the customer as they are placed. The display boards also provide you with advertising, and reduce errors.

## Preparation Projection System

Based on a projection of past sales in combination with live sales, the Preparation Projection System informs the cooks of what currently needs to be prepared. The system virtually eliminates over preparation and waste.

## Back Office Station

Use the back office station for confidential reporting and daily management needs, allowing the POS stations to be dedicated to order processing.

## Enterprise Management Solution

Flashpoint's Enterprise Management solution gives you the power to exchange information between your corporate office(s) and remote stores by integrating corporate driven menu management, regional pricing, and Data Warehousing into one powerful package. The Enterprise Management Solution also gives you the ability to program POS setups, inventory, and employees from one central location, while being able to choose the destination for the data easily and efficiently.
