

IRIS POS System

P.O.S. SALES • SERVICE • SUPPORT • SOFTWARE • SURVEILLANCE • SUPPLIES

XPIENT Solutions' affordable, easy to use point-of-sale application is infinitely flexible and easily adaptable to your business. Whether your environment is quick service, fast casual, table service or line service, IRIS affords unlimited options to support distinctive business requirements. Uniquely configurable touch screen technology speeds employee training and performance as well as optimizing order accuracy and speed-of-service. Additionally, the IRIS eKitchen™ Display System component offers an intuitive graphical application designed to enhance efficiency and improve throughput via superior kitchen coordination.

Flexibility

Maintaining efficient operations requires keeping pace with industry trends and technology. IRIS is infinitely flexible and supports:

- Any "open" touchscreen Point-of-Sale terminal. Currently certified platforms include - IBM, NCR, Panasonic, PAR, Sharp, CRS, and FlyTech. XPIENT is able to certify other POS hardware platforms upon request
- Peripheral devices including scales, bar code scanners, change dispensers, customer displays, order confirmation boards and handheld terminals
- Portable wireless order entry devices that replicate POS Terminal functionality
- Taking orders and tendering simultaneously on a single terminal which can reduce the total number of terminals required
- Use of POS terminals for other functions such as Computer Based Training and Point of Purchase promotions
- Maintaining multiple register personalities (for example, the same terminal can be changed from counter to drive-thru mode) based on register number, employee id or job code, type of order or time of day

IRIS POS System

P.O.S. SALES • SERVICE • SUPPORT • SOFTWARE • SURVEILLANCE • SUPPLIES

• Point-of-Sale Capabilities

- A large part of your customer's experience depends on speed and order accuracy IRIS provides the tools and capabilities that will allow you to:
 - Easily create and maintain menus, including graphics, layouts and sizing components for optimum cashier productivity
 - Automatically detect value meal combinations Handle 'conversational ordering' which combines items in the most favorable manner regardless of ordering sequence
 - Support customer activated terminals for self-service
 - Provide order confirmation and video receipt
 - Up-sell based on item combinations
 - Accept credit, debit, EBT, stored value cards and coupons
 - Periodically and/or randomly flag a customer receipt for marketing specials or customer surveys
 - Handle complex discount scenarios
 - Calculate sales tax through comprehensive rules-based algorithm

Business Management

IRIS back office capabilities include:

Automatic, unattended end of day processing

- Cash management that traces cash from point of order to point of deposit
- Complete system redundancy that maintains point-of-sale and kitchen functionality if back office system fails
- Centrally manages multiple register programs
- Electronic journal access via graphical user interface
- Tracking of tax exempt sales
- Ability to capture marketing information such as zip code
- Human Resources Management / Payroll Calculations
- Time and Attendance
- Comprehensive reporting including support for multi-brand franchises
- mymessage.net™ email messaging for intra-office and corporate communications
